

AUTOMOTIVE HALOGEN GLOBES

H15 Intense Plus 30

H15 P/No. 48096BL

H16 12V 19W

H16 P/No. 48098BL

As the Australian vehicle car park evolves so does the Narva range of standard and performance globes. The introduction of a number of vehicles which run a H15 globe as a DRL / High Beam, has led to the introduction of the Intense H15 globe. Designed to suit popular models including the Ford Ranger, Everest and newer model VW Golf. This is designed to lift the look of any vehicle using H15's in DRL functions. Standard globes are very yellow and can detract from the look of the vehicle. Upgrading to the H15 Intense provides a premium white look whilst still conforming to the ADR regulations making the globes totally legal.

Also being added to the range is the new H16 globe. Designed with long life as standard these globes are ideal for direct replacement of original equipment as they are often the same globe which are fitted on the production line. The new H16 globe is designed to fit newer model Toyota Hilux, RAV4 and Corolla. These globes are available both in boxed and blistered form making them ideal for both trade and retail businesses.

To confirm whether these globes suit your vehicle, check your vehicle's handbook or visit:
<https://www.narva.com.au/resources/globe-application-guide>.
