# UNRIVALLED L.E.D HEADLIGHT PERFORMANCE

WHITER. BRIGHTER. LONGER.

**THE  
ULTIMATE  
HEADLIGHT  
UPGRADE**

## THE PERFECT CHOICE FOR EVERYDAY VEHICLES

- DUAL 12/24 VOLTAGE
- 5700°K WHITE LIGHT
- 4000 LUMENS (PAIR)
- 25x LONGER LIFE\*
- 2 YEAR WARRANTY

SUREFIT

30% MORE LIGHT\*

STANDARD HALOGEN

## IDEAL FOR PROFESSIONAL DRIVERS AND ENTHUSIASTS

- DUAL 12/24 VOLTAGE
- 5700°K WHITE LIGHT
- 5000 LUMENS (PAIR)
- 30x LONGER LIFE\*
- 3 YEAR WARRANTY

PERFORMANCE

60% MORE LIGHT\*

\*Compared to standard halogen globes. Results vary with headlamp type.

# SUREFIT

- ✔ A 'DIY' L.E.D UPGRADE FOR MOST PASSENGER VEHICLES
- ✔ SIMILAR SHAPE & SIZE TO A STANDARD HALOGEN GLOBE
- ✔ H7 PROJECTOR STYLE HEADLAMP OPTION AVAILABLE

Surefit L.E.D Globes are a true fit and forget headlamp upgrade. Thanks to their compact, integrated IP65 cooling fan, these globes will retrofit most standard headlamp housings.

They're available in four popular sizes including a specific 'projector' headlamp option.

## PRECISE BEAM CONTROL

Unlike other L.E.D globes, Narva's range feature a halogen-like beam cut off meaning other road users won't be dazzled by stray light.

## SUITABLE FOR MOTORCYCLES

As Surefit globes are a comparable size to standard halogen globes, they'll fit in most compact motorcycle headlamp housings.

## IP65 RATED

Featuring an IP65 rated cooling fan, Surefit Globes are dust tight and won't be harmed by rain or water sprayed directly on them.

# SUREFIT H7 PROJECTOR

- ✔ SPECIFICALLY DESIGNED FOR PROJECTOR STYLE HEADLAMPS
- ✔ QUALITY CONSTRUCTION WITH A PRECISE BEAM CUT OFF
- ✔ AN EASY DIY RETROFIT TO MOST VEHICLE'S CURRENT HOUSING

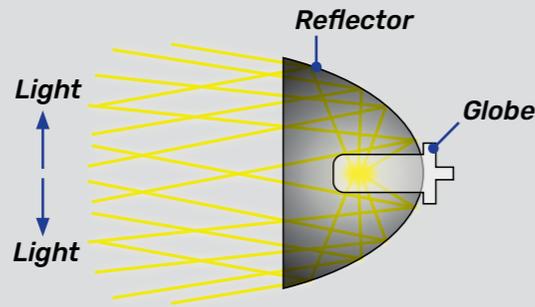

Projector headlamps are becoming much more common, especially in premium vehicles. They work much differently to a standard headlamp with a much smaller reflector which directs a more controlled light onto the road.

To date most retrofit L.E.D globes have produced a poor beam pattern with lots of stray wasted light. The Surefit H7 'Projector' L.E.D Globe has been manufactured with precision engineering however, giving a maximum output with minimal waste.

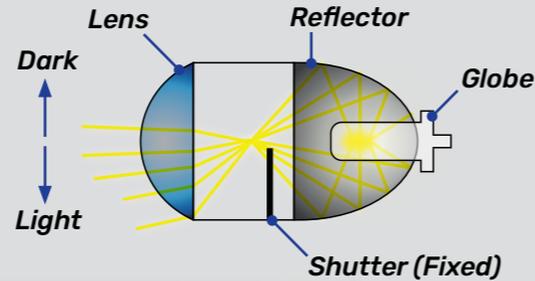

## STANDARD HEADLIGHTS

Standard vehicle headlamps utilise free form reflector optics to capture and focus the projection of light produced by the headlight globe.

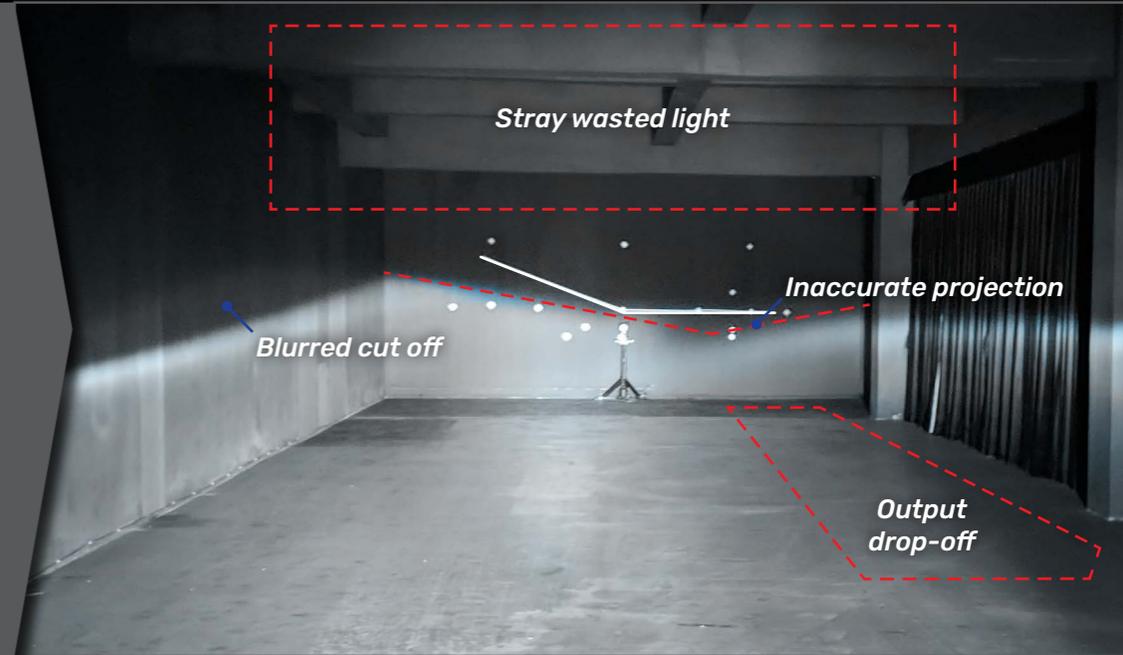

## PROJECTOR HEADLIGHTS

Projector headlamps utilise a more complex system of reflector and optic lens, requiring a Projector specific globe to efficiently control the output.

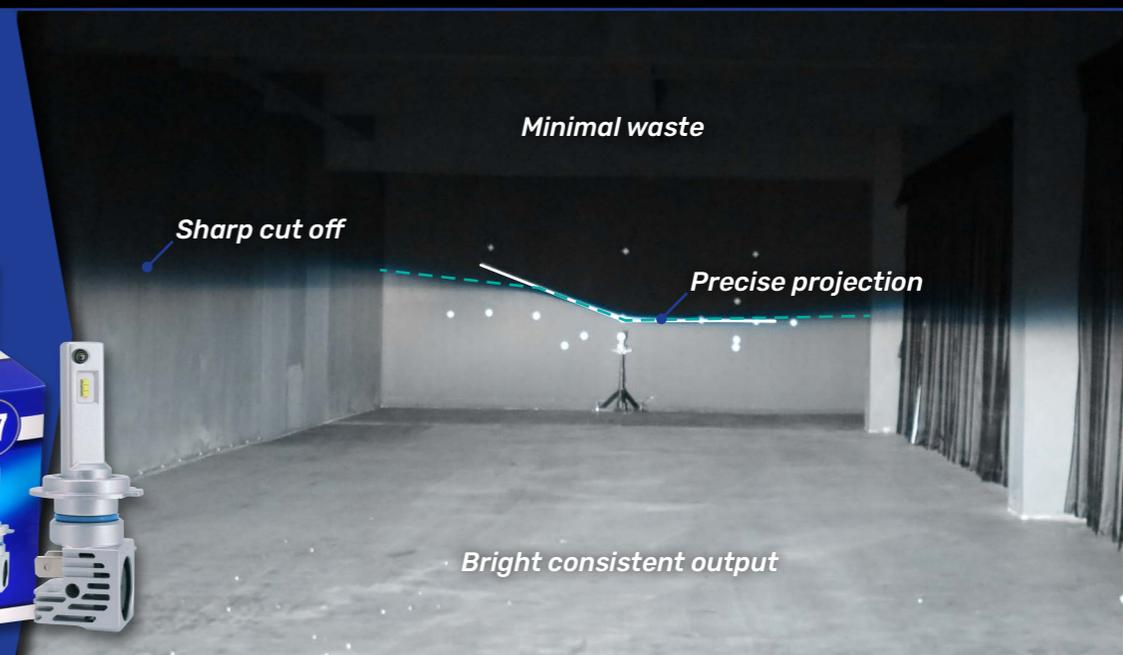

\*Compared to standard halogen globes. Results vary with headlamp type.

# PERFORMANCE

- ✔ ULTIMATE COOLING FOR LONG HOURS OF OPERATION
- ✔ EXTREME DURABILITY WITH NO MOVING PARTS
- ✔ COMPREHENSIVE RANGE OF GLOBE SIZE CONVERSION KITS

The output of L.E.D globes decreases as heat increases. Narva Performance L.E.D Globes feature an external driver and adjustable heatsink which keep the globes cooler for longer, resulting in a much longer optimal output.

With up to 80% less current draw than standard halogen globes, over 30,000 hours of run time and no moving parts, these globes provide the ultimate in brightness, quality and durability.

DUAL  
12/24  
VOLTAGE

## PRECISE BEAM CONTROL

Unlike other L.E.D globes, Narva's range feature a halogen-like beam cut off meaning other road users won't be dazzled by stray light.

## IDEAL FOR LONG HAULS

Superior cooling provides a longer peak output, meaning they'll continue producing powerful light throughout your entire journey.

EXTERNAL DRIVER

ADJUSTABLE BEAM PATTERN  
PREVENTS STRAY LIGHT\*

## 'DIY' CONVERSION AND ADJUSTMENT

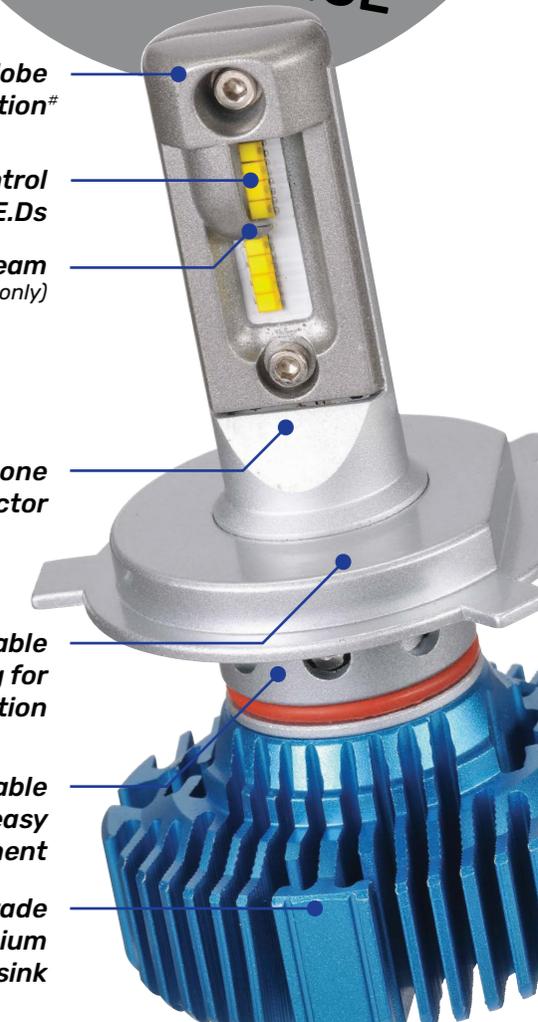

With a removable locator ring, external driver and adjustable globe orientation, Performance L.E.D Globes can be retrofitted at home.

30%  
MORE LIGHT THAN  
SUREFIT GLOBES

HEATSINK COOLED  
FOR THE ULTIMATE  
IN DURABILITY &  
A LONGER PEAK  
PERFORMANCE

- Adjustable globe orientation#
- Precise control of L.E.Ds
- High and low beam (18404 & 18415 only)

- All-in-one globe connector
- Removable locator ring for easy installation
- Adaptable housing for easy adjustment
- Aviation grade 6063 aluminium heatsink

\*Compared to standard halogen globes. Results vary with headlamp type. #H4 and H7 globes only.

## CANBUS MODULES & LOAD RESISTORS

Some vehicles use a CANBUS system to detect when a globe is blown or faulty.

L.E.D globes draw a fraction of the current of standard halogen globe. This may cause some systems to think the globe is faulty, resulting in a warning light on the dash or the lights flickering or pulsing.

It is recommended to consult a qualified Auto Electrician to see if your vehicle is detailed as requiring CANBUS Modules or Load Resistors.

**Most vehicles will not require these to be fitted.**

Refer the Narva website or in-store for suitable CANBUS modules & Load Resistors (sold in pairs).
